

THE CREATIVE INNOVATION

The Program

- The TCI factory rebuilding program is based on complete overhauling of former and existing TCI EV models. It includes much more than simple reconditioning with superficial adjustments and cosmetic improvements.
- When we rebuild a TCI EV model it is completely disassembled. All parts and components are thoroughly cleaned, inspected and reworked or replaced as necessary.
- New and, if applicable, improved mechanical, electrical and electronic equipment is installed during the rebuilding process.
- After painting and re-assembly, each vehicle is fully tested before being released to the customer.
- A completely re-manufactured TCI EV will be protected under the same warranty as a new TCI EV.

KEEP YOUR EV RUNNING AND THE ENVIRONMENT CLEAN

Replacement Parts Availability

We recommend that a small service kit be purchased for each rebuilt TCI EV. This kit consists of carefully selected items that will meet most emergency needs. In addition, TCI maintains a wide range of parts at the factory.
